

Combined Management Systems Policy

The Leadership of One Digital Ltd is fully aware that the breadth and perceived quality of its services directly affects its competitive position, profitability and reputation. At the same time, we recognise the impacts that our operations, activities and waste have on the environment. We maintain a commitment to responsibly serve the interests of our customers and the wider community by acknowledging and meeting all of our contractual, legal and other obligations through encouraging our staff to be responsible for the standards of workmanship they apply and to minimise the adverse effects of any impacts through the implementation and continual improvement of One Digital's integrated business management system.

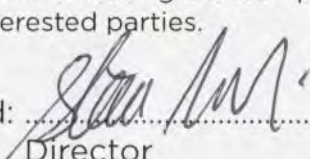

To all personnel is delegated both the defined responsibility and the authority to identify and evaluate quality or environmental problems and to initiate, recommend and provide effective solutions in relation to the processes that they control.

Through continued effective use of our policies and procedures we aim to ensure:

- Full compliance with all relevant legislation and statutory regulation relating to our personnel, machinery and vehicles, materials and conformance with associated principles and obligations within the current ISO standards 9001 & 14001.
- That all activities which directly affect the quality of services are carried out under controlled conditions, having provided all relevant supporting documentation and training to all relevant personnel.
- The consideration of environmental concerns and impacts including the prevention of pollution into all of our decision making and activities, thus minimising the generation of waste and reducing its environmental impact through responsible disposal and recycling options.
- The setting and monitoring of performance criteria against objectives across various functional levels and across all business areas within the company to encourage and facilitate continual improvement.

One Digital Ltd is therefore committed to the following key policy principles:

- Working in partnership with our suppliers and customers to establish high standards of supplied materials, skilled production, reliable delivery and attentive aftersales service.
- Ensuring sufficient stocks of materials are held and equipment is efficiently operated and maintained to minimise production delays and keeping customers informed about any relevant issues as soon as possible.
- Sourcing non-hazardous alternatives to hazardous materials where commercially viable and using recycled, recyclable and environmentally responsible products where these are available, economical and suitable.
- Recognising that the minimum acceptable level of environmental performance is maintained as set out in current environmental legislation.
- Promoting high levels of quality and environmental awareness among employees, and training staff about key issues that affect their work and their responsibilities in maintaining good working practices.
- Communicating the Company's Policy and commitments to all staff, suppliers, customers and other interested parties.
